About Me

MERN Stack Developer with hands-on experience building scalable full-stack web applications and secure RESTful APIs. Proficient in JWT authentication, real-time communication via Socket.io, IP geolocation integration, and GenAI API consumption. Strong CS fundamentals in DSA and OOP. Seeking to contribute to high-impact, production-grade web development projects.

F.R.I.D.A.Y – AI Assistant | LangChain, Node.js, React.js, MongoDB, Socket.io, Firebase | [\(Live Link\)](#)

- Built a Perplexity-style AI assistant with real-time web search, multi-provider LLM fallback (Groq, Gemini, Mistral), and an intelligent query classifier that routes requests to the optimal model.
- Engineered a multi-agent architecture with LangChain tool-calling — web search (Tavily/Serper), real-time weather, calculator, and datetime tools with automatic provider failover.
- Implemented OAuth 2.0 authentication via Firebase (Google & GitHub) with JWT access/refresh token rotation and HTTP-only cookie sessions.
- Developed real-time streaming chat UI with React.js, Redux Toolkit, and Socket.io; supported persistent chat history with MongoDB.
- Deployed on Vercel (frontend) and Render (backend) with production-grade CORS, cookie security, and environment-based configuration.

PROJECTS CityFriend | MERN Stack, Socket.io, JWT, IP Geolocation | [\(Live Link\)](#)

- Engineered a city-based social networking platform for real-time user connections and community building
- Built full-stack app with React.js, Node.js, Express.js, and MongoDB; implemented JWT-based auth with rolebased access control.
- Integrated third-party IP Geolocation APIs to auto-detect user city and enable dynamic location-based networking.
- Developed real-time one-to-one chat using Socket.io and WebSockets, reducing message latency by ~30%.
- Implemented social features — posts, likes, comments, follow/unfollow — driving measurable increase in user engagement.
- Optimized MongoDB with indexing and aggregation pipelines, improving average API response time by ~25%.

Movie Recommendation System | React.js, Context API, Third-party APIs | [\(Live Link\)](#)

- Built a movie discovery app delivering personalized recommendations by consuming third-party movie APIs.
- Managed global state with Context API; used localStorage for persistent data, ensuring seamless cross-session experience.
- Implemented responsive UI with clean component architecture for fast navigation and improved usability.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C, C++.

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Redux Toolkit, Context API

Backend: Node.js, Express.js, REST APIs, JWT, OAuth, GenAI APIs

Database: MongoDB, Mongoose, Aggregation, Indexing

Tools & Platforms: Git, GitHub, Postman, Vercel, Render.

EDUCATION

SunderDeep College of Management & Technology CCSU Affiliated.

Bachelor of Computer Applications (BCA equivalent) Aug 2023

– June 2026

CERTIFICATIONS

Full Stack MERN Development with GenAI

Sheryians Coding School • 2026

AI/ML Hands-On Training

SunderDeep College • 2025
